

microsoft two-piece nappy user guide

Important: Washed and/or used items can not be refunded.

Before using the nappies pre-wash in non-biological washing powder at 60°C at least once before use.

Place the folded nappy, with the nappy liner around the centre into the cover. Ensure that the nappy fits to the front and back of the cover and is not sticking out.

Laundry

Wash in accordance with the washing instructions on the garment label.

Nappies

Soak method

Soak nappies in a solution (15ml of miofresh for every 5 litres of water) of miofresh anti-bacterial nappy cleanser for a minimum of 2 hours. Nappies can then be rinsed in cold water or washed in non-biological detergent.

No soak method

Add 15ml miofresh to the wash with a non biological detergent. Nappies can be washed in temperatures up to 90°C but 60°C is adequate. Tumble dry on low or line dry.

Nappy covers

Close Velcro® tabs. Machine wash at 60°C in non-biological detergent.

Hand wash or rinse in cool water. Tumble dry on low or line dry. Dry away from direct heat. Do not use chlorine bleach or borax. Do not iron. Do not use fabric softener. Do not soak the nappy cover.

Soiled nappy covers

Occasionally there may be some soiling inside the nappy cover. In some cases, not using a liner can help. Due to the nature of the product, however we cannot guarantee that this can be

completely prevented. If staining occurs - use only mild or natural stain removing agents so as not to irritate the baby's skin and/or cause premature deterioration of the fabric.

Nappy liners

mioliners help prevent heavy soiling of the nappies reducing the need for soaking and sluicing. Soiled liners can be flushed one at a time. Wet liners can be disposed of in the rubbish bin.

Caution: Flushing liners may cause blockage in old or damaged drains. No responsibility can be accepted for individual drain systems.

Nappy size

Please note: as babies' shapes and sizes vary a lot these sizes can only be taken as approximate.

Troubleshooting checklist

If the nappies are leaking check the following:

- Have you pre-washed your nappies at 60°C? The nappies become more absorbent after the first few washes.
- Change frequently as nappies should be changed every 2-4 hours.
- Do not use fabric softener. This will reduce absorbency of the nappy.
- Check that the nappy is completely tucked in the cover at the waist and leg holes.
- Do not use a double layer of the nappy liner.
- Remove the liner to improve the containment of loose stools particularly for breastfed babies.
- Use sunlight as a natural bleaching agent.
